

Connecting People with Technology

Technology Assessment

The Technology Assessment service takes an in-depth look at your network environment and reports all findings, conclusions and recommendations.

The **physical assessment** component of this service collects information and issues regarding cabling, hardware, software, server, security and antivirus practices.

The **executive interview** component is completed with the company owner/president and collects information on overall business goals, IT processes, budgets and future plans.

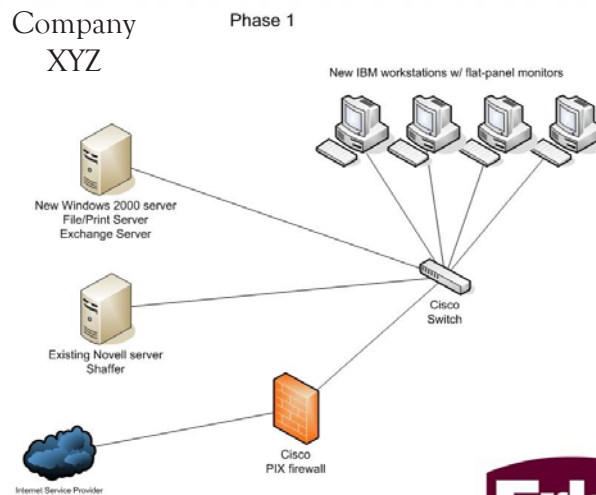

The **final report** contains the completed physical assessment, executive interview, network diagram and an easy-to-read summary of all information. Erb's uses expertise and professional consulting services to design appropriate solutions to tie your technology choices to your business needs.

Program Features

- Physical Assessment
- Executive Interview
- Report of findings, conclusions and recommendations
- Network Diagram

Benefits

- Uncovers areas of concern, both previously known and, oftentimes, not known.
- Provides proactive recommendations if the business is at risk for down time due to hardware failure, software issues or problems stemming from ineffective security or antivirus measures.
- Provides documentation for compliance.
- Allows you to align your IT and business goals.
- Performed by Erb's expert account executive, trained and certified service technician, and systems engineer.
