**Erb's Technology Solutions Announces New Managed Services Offering**

Erb's has officially implemented their revamped Managed Services offering, e-SUITE.

**Cedar Rapids, Iowa, May 26, 2011** – Erb's Technology Solutions, a front-runner in the IT Managed Services arena, has joined forces with distribution partner SYNEX and Level Platforms to re-define their Managed Services offering. This transition was made as a result of evolving technology and the inevitable implementation of cloud services nationwide.

Erb's e-Suite, elite Managed Services, leverages leading RMM (remote monitoring tool) features but also includes a unified web-based dashboard, managed e-mail security, data backup and recovery services, power management and Symantec endpoint protection.

"We wanted to be able to offer a complete, fully-integrated service offering that makes sense to our customers, from the SMBs to the Enterprise to the Government agencies. We went back to the drawing board, consulted with industry experts, asked questions and re-examined our current offering to deliver a suite we could support and that was compatible for our diverse market," stated Mike Brogan, President of Erb's.

The offering, provided by SYNEX and Level Platforms, was designed for ease-of-use without requiring massive investments into IT infrastructures and staff for both VARs and end-user alike.

The service offering officially launched in April of this year however Erb's, e-SUITE rendition is now available for contract purchase and has been transitioned into all current and attuned Managed Services accounts. Information on Bundle options and further focus details are now available upon request and online.

**About Erb's Technology Solutions**
